TABLE OF CONTENT

Table of Contents	Page No.
1. Top 10 Records	2
2. Total Sessions	2
3. Total Revenue	3
4. Event Analysis	4
5. Device Analysis	4
6. Channel Analysis	5
7. Regional Analysis	6
8. Total Purchases	6
9. Purchase Revenue	7
10. Revenue by Channel	8
11. Revenue by Region	8
12. Product Category Analysis	9
13. Revenue by Product Category	10
14. Revenue by Device	11
15. Conversion Rate	12
16. Funnel Drop-Off Rate	13

Query 1: Top 10 Records

Objective

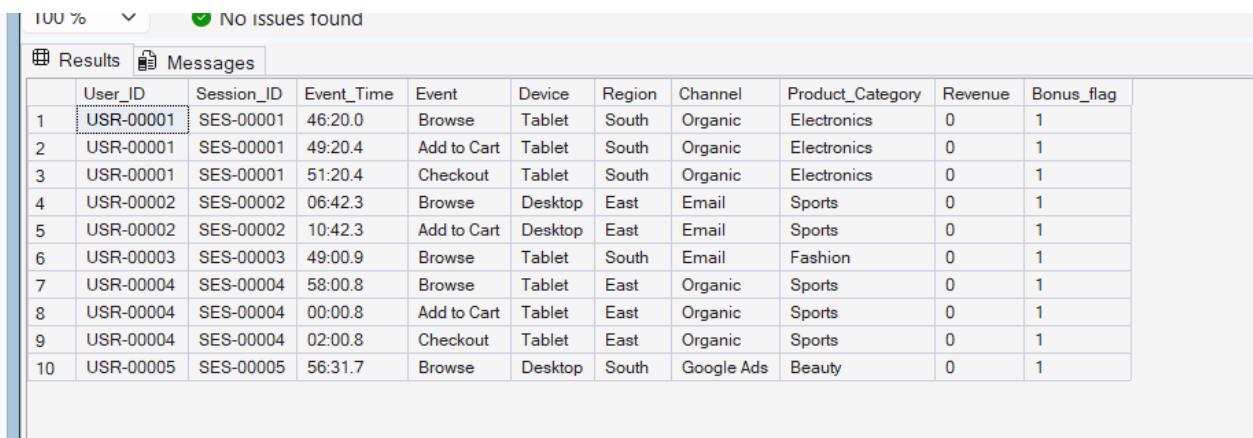

To display the first 10 records from the dataset and verify that the data has been imported correctly into the SQL Server database.

SQL Query

```
SELECT TOP 10 *
```

```
FROM Funnel;
```

Output

	User_ID	Session_ID	Event_Time	Event	Device	Region	Channel	Product_Category	Revenue	Bonus_flag
1	USR-00001	SES-00001	46:20.0	Browse	Tablet	South	Organic	Electronics	0	1
2	USR-00001	SES-00001	49:20.4	Add to Cart	Tablet	South	Organic	Electronics	0	1
3	USR-00001	SES-00001	51:20.4	Checkout	Tablet	South	Organic	Electronics	0	1
4	USR-00002	SES-00002	06:42.3	Browse	Desktop	East	Email	Sports	0	1
5	USR-00002	SES-00002	10:42.3	Add to Cart	Desktop	East	Email	Sports	0	1
6	USR-00003	SES-00003	49:00.9	Browse	Tablet	South	Email	Fashion	0	1
7	USR-00004	SES-00004	58:00.8	Browse	Tablet	East	Organic	Sports	0	1
8	USR-00004	SES-00004	00:00.8	Add to Cart	Tablet	East	Organic	Sports	0	1
9	USR-00004	SES-00004	02:00.8	Checkout	Tablet	East	Organic	Sports	0	1
10	USR-00005	SES-00005	56:31.7	Browse	Desktop	South	Google Ads	Beauty	0	1

Result

The query displays the first 10 customer interaction records, including user ID, session ID, event, device, channel, region, product category, revenue, and bonus flag.

Business Insight

Previewing the dataset helps verify data quality and ensures that all columns have been imported correctly before performing further analysis.

Query 2: Total Sessions

Objective

To determine the total number of unique customer sessions recorded in the marketing funnel dataset.

SQL Query

```
SELECT COUNT(DISTINCT Session_ID) AS TotalSessions
```

FROM Funnel;

Output

100 %

✓ No issues found

Results

Messages

	TotalSessions
1	10000

Result

The dataset contains **10,000** unique customer sessions.

Business Insight

The total number of sessions represents the overall website traffic and serves as the baseline for measuring customer engagement and conversion performance.

Query 3: Total Revenue

Objective

To calculate the total revenue generated from all purchase transactions.

SQL Query

```
SELECT ROUND(SUM(Revenue),1) AS TotalRevenue
```

FROM Funnel;

Output

100 %   No issues found

 Results

 Messages

	TotalRevenue
1	277323.1

Result

The total revenue generated is **₹277,323.1**.

Business Insight

Total revenue is a key business metric that reflects the financial performance of the marketing campaigns and customer purchases.

Query 4: Event Analysis

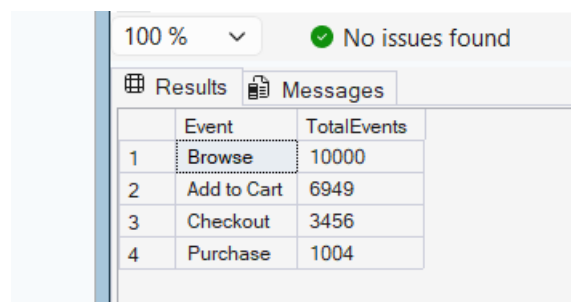

Objective

To analyze the number of customer interactions at each stage of the marketing funnel.

SQL Query

```
SELECT Event,  
COUNT(*) AS TotalEvents  
FROM Funnel  
GROUP BY Event  
ORDER BY TotalEvents DESC;
```

Output

	Event	TotalEvents
1	Browse	10000
2	Add to Cart	6949
3	Checkout	3456
4	Purchase	1004

Result

- Browse: **10,000**
- Add to Cart: **6,949**
- Checkout: **3,456**
- Purchase: **1,004**

Business Insight

The results highlight significant customer drop-offs between each stage of the funnel. Understanding these stages helps businesses identify where improvements can increase conversions.

Query 5: Device Analysis

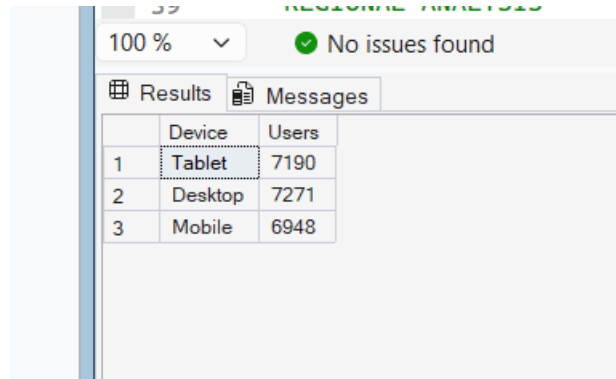

Objective

To determine the distribution of customer sessions across different devices.

SQL Query

```
SELECT Device,
COUNT(*) AS Users
FROM Funnel
GROUP BY Device;
```

Output

	Device	Users
1	Tablet	7190
2	Desktop	7271
3	Mobile	6948

Result

- Desktop: **7,271**
- Tablet: **7,190**
- Mobile: **6,948**

Business Insight

Desktop users account for the highest number of sessions, indicating that optimizing the desktop experience can positively influence customer engagement.

Query 6: Channel Analysis

Objective

To analyze customer sessions generated through different marketing channels.

SQL Query

```
SELECT Channel,
COUNT(*) AS Users
FROM Funnel
GROUP BY Channel;
```

Output

39 -- REGIONAL ANALYSIS

100 % ✓ No issues found

Results Messages

	Channel	Users
1	Google Ads	5427
2	Email	5404
3	Social Media	5200
4	Organic	5378

Result

The dataset includes customer traffic from Google Ads, Email, Organic Search, and Social Media.

Business Insight

Comparing marketing channels helps businesses identify which acquisition sources generate the most customer traffic and optimize marketing investments.

Query 7: Regional Analysis

Objective

To determine customer session distribution across different geographical regions.

SQL Query

```
SELECT Region,
COUNT(*) AS Users
FROM Funnel
GROUP BY Region;
```

Output

100 % ✓ No issues found

Results Messages

	Region	Users
1	North	5268
2	East	5397
3	South	5466
4	West	5278

Result

South recorded the highest number of customer sessions, followed closely by East, West, and North.

Business Insight

Regional analysis helps businesses understand geographic customer engagement and supports location-specific marketing strategies.

Query 8: Total Purchases

Objective

To calculate the total number of completed purchases.

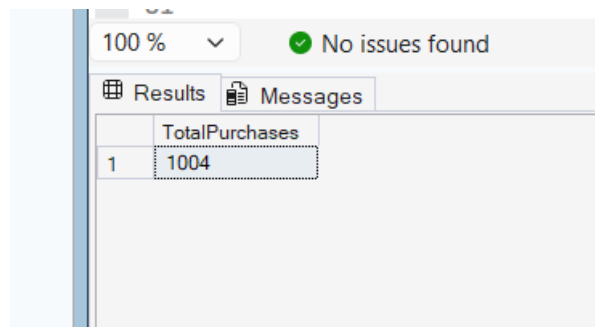

SQL Query

```
SELECT COUNT(*) AS TotalPurchases
```

```
FROM Funnel
```

```
WHERE Event = 'Purchase';
```

Output

The screenshot shows a database interface with a query results window. At the top, there is a status bar indicating '100 %' and 'No issues found'. Below this, there are tabs for 'Results' and 'Messages'. The 'Results' tab is active, displaying a table with one column named 'TotalPurchases' and one row containing the value '1004'.

TotalPurchases
1004

Result

A total of **1,004** purchase events were recorded.

Business Insight

The number of purchases represents successful conversions and is an important indicator of overall business performance.

Query 9: Purchase Revenue

Objective

To calculate the revenue generated exclusively from completed purchase events.

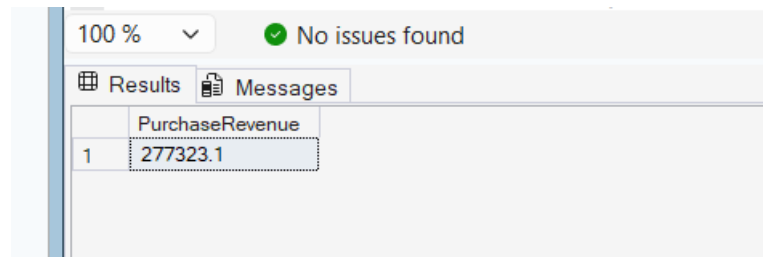

SQL Query

```
SELECT ROUND(SUM(Revenue),1) AS PurchaseRevenue
```

```
FROM Funnel
```

WHERE Event = 'Purchase';

Output

The screenshot shows a software interface with a top bar containing a zoom level of '100 %' and a status message 'No issues found' with a green checkmark. Below this are two tabs: 'Results' (active) and 'Messages'. The 'Results' tab displays a table with one row. The first column is labeled '1' and the second column is labeled 'PurchaseRevenue' with a value of '277323.1'.

	PurchaseRevenue
1	277323.1

Result

The query calculates the total revenue earned from completed purchases.

Business Insight

Purchase revenue reflects the direct financial contribution of converted customers and helps evaluate sales effectiveness.

Query 10: Revenue by Channel

Objective

To compare revenue generated through different marketing channels.

SQL Query

```
SELECT  
Channel,  
ROUND(SUM(Revenue),1) AS TotalRevenue  
FROM Funnel  
GROUP BY Channel  
ORDER BY TotalRevenue DESC;
```

Output

100 % No issues found

	Channel	TotalRevenue
1	Google Ads	73862.3
2	Email	69126.5
3	Social Media	68361.2
4	Organic	65973

Result

Google Ads generated the highest revenue, followed by Email, Social Media, and Organic Search.

Business Insight

Revenue comparison enables businesses to identify the most profitable marketing channels and allocate advertising budgets more effectively.

Query 11: Revenue by Region

Objective

To analyze revenue generated across different geographical regions.

SQL Query

```
SELECT
Region,
ROUND(SUM(Revenue),1) AS TotalRevenue
FROM Funnel
GROUP BY Region
ORDER BY TotalRevenue DESC;
```

Output

100 % No issues found

	Region	TotalRevenue
1	South	77421.5
2	North	68645.1
3	East	66116
4	West	65140.5

Result

The South region generated the highest revenue among all regions.

Business Insight

Regional revenue analysis helps businesses identify high-performing markets and develop targeted regional marketing strategies.

Query 12: Product Category Analysis

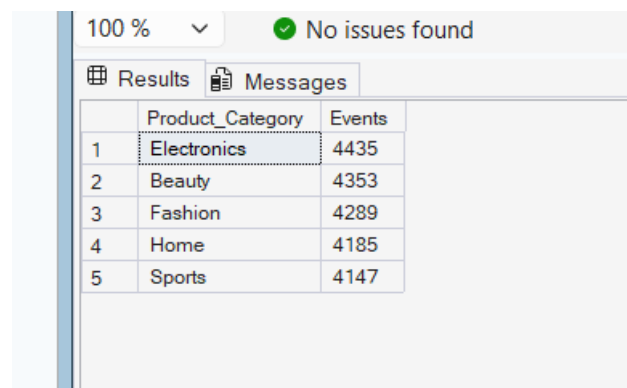

Objective

To determine customer activity across different product categories.

SQL Query

```
SELECT  
Product_Category,  
COUNT(*) AS Events  
FROM Funnel  
GROUP BY Product_Category  
ORDER BY Events DESC;
```

Output

The screenshot shows a SQL query results window. At the top, there is a zoom level of '100 %' and a status message 'No issues found' with a green checkmark icon. Below this, there are two tabs: 'Results' (active) and 'Messages'. The 'Results' tab displays a table with the following data:

	Product_Category	Events
1	Electronics	4435
2	Beauty	4353
3	Fashion	4289
4	Home	4185
5	Sports	4147

Result

Electronics recorded the highest number of customer interactions, followed by Beauty, Fashion, and Home.

Business Insight

Product category analysis identifies customer interests and helps businesses optimize inventory planning and promotional campaigns.

Query 13: Revenue by Product Category

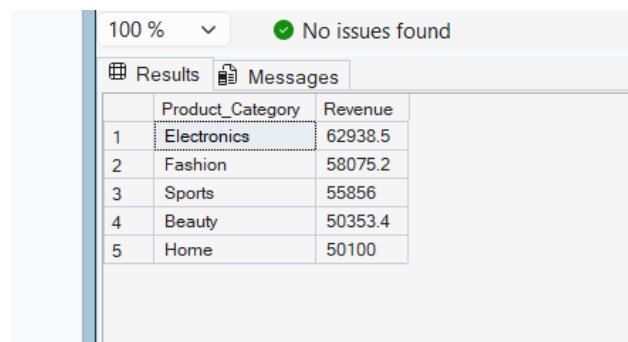

Objective

To evaluate revenue generated by each product category.

SQL Query

```
SELECT  
Product_Category,  
ROUND(SUM(Revenue),1) AS Revenue  
FROM Funnel  
GROUP BY Product_Category  
ORDER BY Revenue DESC;
```

Output

	Product_Category	Revenue
1	Electronics	62938.5
2	Fashion	58075.2
3	Sports	55856
4	Beauty	50353.4
5	Home	50100

Result

The query identifies the product categories contributing the highest revenue.

Business Insight

Understanding product-level revenue helps businesses prioritize high-performing product categories and improve sales strategies.

Query 14: Revenue by Device

Objective

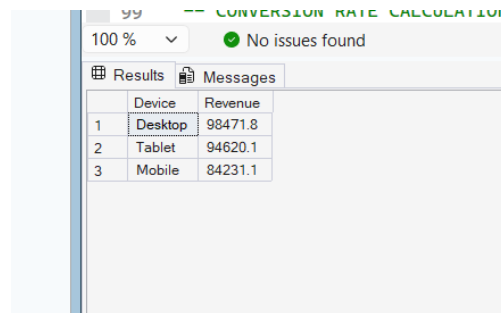

To analyze revenue generated from different customer devices.

SQL Query

```
SELECT
```

```
Device,
ROUND(SUM(Revenue),1) AS Revenue
FROM Funnel
GROUP BY Device
ORDER BY Revenue DESC;
```

Output

	Device	Revenue
1	Desktop	98471.8
2	Tablet	94620.1
3	Mobile	84231.1

Result

Desktop devices generated the highest revenue, followed by Tablet and Mobile.

Business Insight

Revenue by device provides insights into customer purchasing behavior and helps businesses optimize the shopping experience across different platforms.

Query 15: Conversion Rate

Objective

To calculate the percentage of customer sessions that resulted in a completed purchase.

SQL Query

```
SELECT
CAST(
COUNT(CASE WHEN Event = 'Purchase' THEN 1 END)
*100.0 /
COUNT(DISTINCT Session_ID)
AS DECIMAL(10,2)) AS ConversionRate
FROM Funnel;
```

Output

100 %		✓ No issues found	
Results		Messages	
	ConversionRate		
1	10.04		

Result

The overall conversion rate is **10.04%**.

Business Insight

The conversion rate measures the effectiveness of the marketing funnel. A lower conversion rate suggests opportunities to improve customer engagement and reduce drop-offs.

Query 16: Funnel Drop-Off Rate

Objective

To measure the percentage of users progressing through each stage of the marketing funnel relative to the initial Browse stage.

SQL Query

```
SELECT
Event,
COUNT(*) AS Users,
CAST(
COUNT(*) * 100.0 /
(SELECT COUNT(*) FROM Funnel WHERE Event = 'Browse')
AS DECIMAL(10,2)) AS FunnelPercentage
FROM Funnel
GROUP BY Event
ORDER BY Users DESC;
```

Output

100 % ✓ No issues found			
Results Messages			
	Event	Users	FunnelPercentage
1	Browse	10000	100.00
2	Add to Cart	6949	69.49
3	Checkout	3456	34.56
4	Purchase	1004	10.04

Result

- Browse: **100.00%**
- Add to Cart: **69.49%**
- Checkout: **34.56%**
- Purchase: **10.04%**

Business Insight

The funnel drop-off analysis clearly identifies where customers leave the purchasing journey. Businesses can use these insights to optimize checkout processes, improve user experience, and increase conversion rates.

Conclusion

The SQL analysis provided valuable insights into customer behavior throughout the marketing funnel. The analysis identified customer drop-off points, evaluated marketing channel performance, measured revenue generation, and calculated the overall conversion rate of 10.04%. These findings can help businesses optimize marketing strategies, improve user experience, and increase customer conversions through data-driven decision-making.
